Secure Perfect® eZ Edition

Just Got Easier and Ultra Lite!

March 20, 2006

NEW 2- and 4-door system starter kits

Secure Perfect eZ Edition kits have been reconfigured to more cost effectively serve the needs of small businesses seeking an entry level system for access control. With this new kit, organizations will not have to sacrifice advanced security management performance and capabilities like integrated photo ID badging and integrated digital video surveillance.

Secure Perfect eZ Edition is designed exclusively to support GE M2000, 4-door controllers. The kits are configured for easy ordering, installation and start-up of new 2- and 4-door systems that allow expansion up to 32 doors with advanced software capabilities.

What's more, the new eZ Edition kits are now packaged with GE Transition™ Series multi-technology readers for simultaneous multi-vendor credential support of 125Khz Proximity and 13.5Mhz contactless smart cards.

A future proof solution you can't outgrow!

Secure Perfect eZ Edition hardware is compatible with—and can be migrated to—large-scale access platforms including Secure Perfect Professional, Enterprise or Global Edition as organization's needs evolve. For those who may require a future UNIX-based solution, eZ Edition can also migrate to Picture Perfect. In addition, customers who may require the enhanced performance and advanced capability of the new PXNplus CPU, the M2000 PX can easily be upgraded in the field in just minutes.

GE designs backwards compatibility into our products so the latest innovations will work in tandem with established security technologies. Through technological excellence, superior quality and an investment in bold, creative ideas, GE provides products and solutions that make the world a safer place.
