

Overview

The MASvideo™ add-on module gives users the ability to integrate video products and incorporate video verification into their operations. MASvideo provides a common viewer for integration to multiple video manufacturers, adding greater flexibility and one look and feel. In addition, the control panel can provide access to camera functions as well as the ability to record and store video in the MASterMind™ Monitoring database.*

MASvideo's integrated features provide a robust set of functionalities at the operator's fingertips—manually initiate a video connection to a remote site, select cameras, pause, record playback, pan, tilt, zoom and more. A video connection can also be automatically initiated when a video-enabled alarm is dispatched and can be set to include pre- and post-alarm recordings.

Video-enabled alarms are user-defined based on the alarm type or the specific alarm zone. Individual cameras are identified in the MASterMind database and can be linked to alarm zones or points so that camera selection is automatic when the alarm is received.

With MASvideo, you can provide a tighter level of security and enhanced video services such as video alarm verification, video escort services and guard services, including scheduled video tours and remote guard response, which can replace or supplement physical guards.

Other added features include bi-directional audio capabilities* and video audits, which can be used in venues such as retail, processing plants and restaurants, for visual inspection and compliance with operational procedures. Additionally, deliveries can be received unattended, freeing up personnel for more important jobs.

*Applies to specific manufacturers. For additional details, contact your GE Security representative.

MASvideo Module

viaMAS Solution Suite

Standard Features

- Fully compatible with the viaMAS integrated solution suite
- Offers a common viewer for multiple video manufacturers
- Control panel provides access to camera functions plus ability to record and store video in the MASterMind database*
- Video alarm verification
- Video escort services
- Guard services—including guard tours and remote guard response
- Video audits—remote visual inspection of workers and operational compliance
- Unattended delivery
- Bi-directional audio capabilities*
- Integrated with third-party video applications

Application

Built on MASterMind™, the world's most scalable and redundant centralized management platform, MASvideo™ is part of the viaMAS™ solution suite. Additional MASterMind solutions include MASterMind Business, MASweb, Telephony and a Global Positioning System.

The MASterMind software suite is ideally suited for enterprise monitoring organizations, governments, financial institutions, municipalities, retail stores and mega centers.

Specifications

Requires MASterMind Monitoring client workstation with the following:

- CPU – 2 GHz
- Memory – 512 MB
- Graphics – 1024 X 768 (32 bit)
- Compatible with MASterMind Monitoring v6.22 or higher
